Need to Download a Video from Facebook?

Have you ever wished you could download a video from Facebook (instead of just saving it), and could never figure out how?
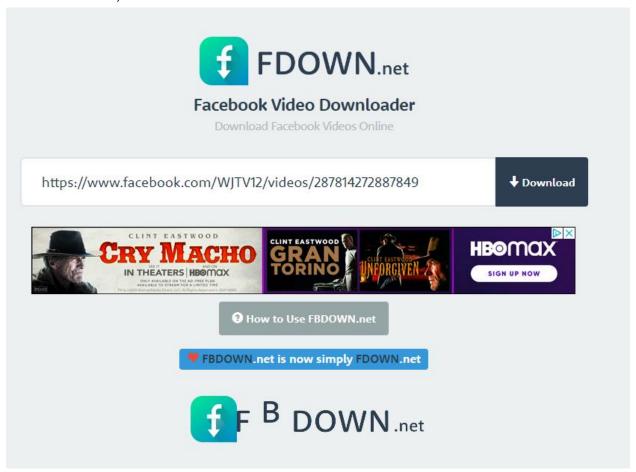

Here's a guide to help:
**Please be aware that some videos will be complicated, depending on the settings of the page you are trying to download from.

On a Computer:

1) Access the Facebook Page you want to download the video from.
2) Click on the actual video, so that the link to the video itself shows in your browser.
3) on the right side, there's an arrow down (or 3 dots), next to the page name.
   a. Click the 3 dots, and click "Download Video"
      i. *This option may not be available. Depending on the settings.
   b. If that option isn't available, on the bottom there's the tool icon for settings, click it, and if it has "Download Video" click it.
   c. If none of those options work, then go back to the down arrow or the 3 dots, and click "Copy Link" (or just copy the link in the link bar at the top of the browser)

4) Once you have the link, go to https://fdown.net/. Paste the link in the bar and click download. (As long as the page/group is not closed/private, your link will download).

On Mobile Device:

5) If there's a Private Group video that you want to use, down the Friendly app on your phone to easily download.
   a. Once you are logged in to the app, click on the search icon on the bottom right.
   b. Search for the page where the video is located.
   c. Find the video you want to download and click to open it.
   d. At the bottom of the screen you will see a purple cloud icon with an arrow down button. Click it, and then click the arrow down button on the Video Line to download to your phone.
